

## A Better Option than Traditional Programs

Our process averages only 1 to 3 months and is much simpler and faster than traditional donor egg treatment options. Traditional cycle programs are logistically more cumbersome and have a greater likelihood of cancellation. The entire fresh egg donation process usually takes well over 6 months for a recipient to select a donor and complete the donor egg IVF cycle.

Egg donors through Donor Egg Bank USA have already gone through extensive medical and psychological screenings, completed their fertility stimulation drug therapy and have had their eggs retrieved and frozen using the latest assisted reproductive technology available called vitrification.

Vitrification is a flash-freeze process that is superior to the conventional slow-freeze method, which frequently resulted in poor egg survival due to the development of ice crystals in the eggs.

With Donor Egg Bank USA, all you have to do is choose the donor you want and then immediately begin treatment.

*Fulfilling Dreams  
Delivering Joy*

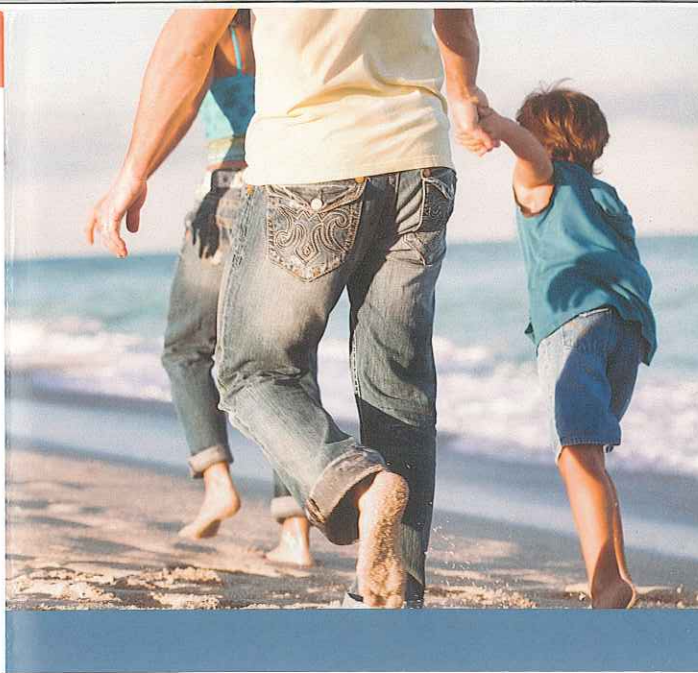

## Donor Egg Bank USA

Choosing an egg donor is an important part of your treatment. Our goal at Donor Egg Bank USA is to provide you a convenient, easy and affordable way to find the frozen donor eggs of your choice so you can begin treatment as quickly as possible.

We represent a national collaboration of fertility practices that have retrieved and "banked" frozen eggs that are catalogued with us to provide patients with a diverse range of donors to choose from.

*"The best fertility experts in the field, coupled with proven donors, is a recipe for success."*

## Affordable

Achieving your dream begins with affording treatment. Donor Egg Bank USA has two financial plans from which to choose.

**Assured Refund Plan** provides up to 6 cycles of treatment and the assurance of delivering a live born baby or a full 100% refund. You have the freedom to stop treatment at any time and still receive an 80% refund. Assured Refund gives you peace of mind during the treatment process.

**Single Cycle Plan** allows you to pay for each cycle individually, usually at significantly reduced rates from a traditional donor cycle. It costs less than the Assured Refund Plan, but there is no refund if your cycle is unsuccessful.

## Our Donors

We carefully review all donor cycles performed with our partner practices, and only the very best donors are asked to donate eggs for Donor Egg Bank USA. Our donors have:

- ✓ Had a previous good-quality cycle
- ✓ Received full genetic, psychological, infectious disease, and drug screening
- ✓ Answered an extensive questionnaire providing details about themselves as well as a multigenerational health review, which is provided to you
- ✓ Come from many different ethnicities and backgrounds

## Advantages to Using Frozen Donor Eggs

Unlike traditional donor egg treatment, Donor Egg Bank USA provides you the following benefits:

**Convenience** – With frozen donor eggs, you can plan your cycle easily and schedule the transfer at a time convenient to you.

**Assurance** – There is 0% chance of a cancelled cycle due to a donor's life event, failure to pass prescreening, or ovarian stimulation problems and less than a 2% chance the eggs will not survive the thawing process.

**Selection** – We offer a diverse selection of fully-cycled donors through our multi-site collaboration.

**Guarantee** – We guarantee a viable embryo will be available for day 3 transfer.

**Genetic Siblings** – Additional eggs can often be purchased for future use upon completion of successful treatment.

## Effective

Clinical Pregnancy Rate Per Transfer: 53%

On-going Pregnancy and Live Birth Rate Per Transfer: 47%\*

\*Our egg bank success rates are based on our first 116 cycles. Our egg bank started in 2009 at one clinic and will expand nationally in 2012.
